

# DynaMed® Decisions

Helping You Effectively and Efficiently Deliver Personalized Patient Care

*DynaMed Decisions* offers a robust collection of interactive decision support tools to help you and your patients make the best decisions based on the latest clinical evidence in the context of an individual's risks, comorbidities, values and preferences.

## A Point of Care Focus

*DynaMed Decisions* is deeply embedded within the clinical workflow allowing the solutions to seamlessly surface relevant guidance and recommendations based on a patient's unique clinical status and data points. Additionally, *DynaMed Decisions* supplies all necessary calculations and clinical criteria for common and complex health care decisions in one place and conveniently populates a chart note based on the context of the decision being made.

## A Patient-First Ethos

*DynaMed Decisions* puts the patient at the center of care. The solution provides interactive visualization of harms and benefits of care options to support meaningful shared decision-making. *DynaMed Decisions* also offers *Option Grid™* decision aids, which cover frequently asked questions related to preference-sensitive decisions. These tools encourage patients to explore what matters most to them and select the option that best matches their values, needs and preferences. They can be shared before, during or after a visit via portable formats and enable education and engagement.
